Solution Report

Symptoms/Condition:

Need to turn the backlight off while not scanning, without exiting **vxscan** or turning “off” the scanner.

Solution:

The easiest way to turn off the scanner backlight without exiting **vxscan** or turning “off” the scanner is to:

1. Set up a dummy scan (1K x 1K pixels)
2. Wait for scan to begin, and for first “tile” to be grabbed.
3. Immediately cancel scan. The backlight will now remain off until the “Scan Canceled” dialog box is cleared (by clicking on the “OK” button).
